RYAN HIDAYAT

Full Stack Developer | Software Development Engineer in Test (SDET)

ryanhidayat123456789@gmail.com | 087775009393 | linkedin.com/in/ryan-hi | Portfolio: ryanhidayat.vercel.app

PROFESSIONAL SUMMARY

Full Stack Developer and Software Development Engineer in Test (SDET) with 7+ years of experience across enterprise software development, AI-powered application engineering, and quality engineering. Experienced in building full-stack web and mobile applications using Next.js, React, React Native, TypeScript, Node.js, Express.js, Sequelize, .NET Core, ASP.NET, Java Spring Boot, and relational databases, as well as integrating Azure OpenAI, Document Intelligence (OCR), and Power BI analytics. Strong background in designing scalable automation frameworks with Playwright, WebDriverIO, Appium, and TypeScript, integrating quality gates into GitLab and Azure DevOps CI/CD pipelines, API and performance testing, and collaborating with cross-functional teams in Agile environments.

TECHNICAL SKILLS

- Programming Languages: TypeScript, JavaScript, Python, Java, C#, Rust, Golang, Dart
- Frontend Development: Next.js, React, Vite React, React Native, TypeScript, HTML, CSS, Tailwind CSS, React Query
- Backend Development: Node.js, Express.js, Sequelize, Spring Boot, .NET Core, ASP.NET Web APIs, GraphQL, REST API, Microservices, ZK Framework
- AI & Data Analytics: Azure OpenAI APIs, OpenAI APIs, Azure Document Intelligence (OCR), Power BI, Microsoft Fabric
- Test Automation: Playwright, WebDriverIO, Appium, Selenium, Katalon Studio, Jest
- Performance Testing: K6, JMeter
- API Testing: Postman
- CI/CD & DevOps: GitLab CI/CD, Azure DevOps (Repos & Pipelines), Docker, GitLab Runners, AWS Device Farm, GitLab Pages, MinIO
- Reporting & Test Management: Allure Report, Jira, Confluence
- Databases: PostgreSQL, MySQL, SQL Server, Oracle, SQL, MongoDB, SAP S/4HANA, SSIS

PROFESSIONAL EXPERIENCE

PT Jasa Marga (Persero) Tbk | Full Stack Developer

Mar 2026 – Present | Jakarta, Indonesia

- Develop and maintain an enterprise Audit Monitoring application covering audit findings, recommendations, action plans, follow-up evidence, due dates, status tracking, and operational/executive dashboards.
- Build responsive frontend modules using Next.js, React, TypeScript, Tailwind CSS, TanStack React Query/Table, React Hook Form, and Zod.
- Develop RESTful backend services using Node.js, Express.js, Sequelize, and PostgreSQL/MySQL, including controllers, services, validation, authentication, role-based access, and audit logging.

- Implement file upload and object-storage workflows with MinIO, Excel import/export processing with ExcelJS, and notification and messaging capabilities for monitoring activities.
- Design and maintain database models, migrations, seeders, filters, pagination, and business logic for audit-monitoring and master-data modules.
- Build and maintain GitLab CI/CD and Docker-based deployment workflows for frontend and backend applications, supporting consistent build, test, and delivery processes.
- Collaborate with business users, QA, DevOps, and other stakeholders to translate audit-monitoring requirements into reliable end-to-end application features.

PT Jasa Marga (Persero) Tbk | Software Development Engineer in Test (SDET)
Jul 2025 – Feb 2026 | Jakarta, Indonesia

- As the first and only SDET in the organization, established and maintained the end-to-end automation ecosystem for both web and mobile applications.
- Architected, developed, and maintained scalable automation frameworks using Playwright, WebDriverIO, Appium, and TypeScript to support regression and smoke testing activities.
- Performed real-device testing on AWS Device Farm using UIAutomator2 (Android) and XCUITest (iOS) to improve cross-platform test reliability.
- Designed, built, and maintained custom Docker images for automation execution environments and integrated them with GitLab Runners to enable parallel and isolated test execution.
- Integrated automated quality gates into GitLab CI/CD pipelines, ensuring deployments meet quality standards before promotion to higher environments.
- Implemented AI-powered self-healing mechanisms to reduce automation maintenance effort caused by frequent UI changes.
- Designed and maintained Allure reporting pipelines published through GitLab Pages to provide transparent test execution results to stakeholders.
- Conducted load and stress testing using K6 to evaluate system scalability, stability, and identify performance bottlenecks during peak traffic conditions.
- Developed a custom SMTP bulk testing solution using Node.js and Nodemailer to validate email delivery performance, reliability, and throughput.
- Collaborated closely with developers, DevOps engineers, QA teams, Product Owners, and business stakeholders to ensure high-quality and stable software releases.

PT Astra International Tbk | SQA Manual & Automation
Dec 2022 – Jun 2025 | Jakarta, Indonesia

- Performed end-to-end Manual Testing across Web, Android, and iOS platforms to ensure application quality and compliance with business requirements.
- Developed, executed, and maintained automation test scripts using WebDriverIO and Playwright to improve regression testing efficiency.
- Performed API Testing and API Automation using Postman and Jest to validate business services and backend integrations.
- Conducted Performance Testing, Load Testing, and Stress Testing using K6 to evaluate system performance under various workloads.
- Created and maintained Test Plans, Test Scenarios, Test Cases, and Test Execution activities in Jira based on Business Process Specifications (BPS).

- Performed System Integration Testing (SIT), Smoke Testing, Smooth Testing, Regression Testing, and User Acceptance Testing (UAT).
- Identified, analyzed, documented, and tracked software defects in Jira while collaborating closely with development teams to ensure timely resolution.
- Prepared user documentation and user guides for deployed applications to support end users during implementation and production rollout.
- Validated and verified application data using MySQL and SAP S/4HANA to ensure data integrity across integrated systems.
- Actively participated in grooming sessions with Project Managers, Business Process Analysts, Frontend Developers, and Backend Developers to discuss requirements, clarify business processes, and estimate testing efforts.

PT Kalimantan Prima Persada | Full Stack Developer

Aug 2020 – Oct 2022 | Jakarta, Indonesia

- Developed and maintained the Learning Integrated Management System (LIMAS) web application using .NET Core, JavaScript, and SQL Server to track training records, conduct online training sessions, assign classes, and evaluate employee assessments.
- Built frontend mobile modules for the Mobile Office KPP (M-OK) application using React Native, TypeScript, and GraphQL, integrating attendance, internal applications, and operational systems into a unified platform for on-the-go staff productivity.
- Developed the Mobile Office KPP Assistant (MOKA) AI-powered web and mobile application using React Native, Vite React, Python, and Azure OpenAI APIs to deliver localized, district-specific conversational assistance for regional office employees.
- Developed the Validation E-Faktur Pajak Windows Service application using ASP.NET, Azure Document Intelligence (OCR), and Azure OpenAI APIs to automatically read, extract key data, and summarize tax invoices with improved processing accuracy.
- Designed and developed the CashFlow KPP interactive dashboard and reporting solution using Power BI, SQL Server, and Microsoft Fabric to record transactions, summarize site-level cash flow, and provide real-time financial insights across locations.
- Built and enhanced enterprise web-based solutions using .NET, JavaScript, SQL Server, and Oracle based on business requirements.
- Designed and implemented RESTful APIs using ASP.NET Web APIs to enable reliable communication and integration across internal operational and enterprise applications.
- Reviewed and maintained source code in Azure Repos (Git) and implemented CI/CD pipelines in Azure DevOps to support automated build and deployment workflows.
- Collaborated with business users and stakeholders through requirement discussions and User Acceptance Testing (UAT) sessions to ensure solution alignment and delivery quality.

PT Adira Finance | Software Engineer

May 2019 – Jul 2020 | Jakarta, Indonesia

- Developed and maintained the ACTION core financial application using Java Spring Boot and the ZK Framework to support loan processing operations across branch offices.
- Resolved production support tickets by analyzing business issues, validating data integrity, and performing Oracle SQL data corrections, including updates, inserts, and data validation.
- Investigated application defects, identified root causes, and collaborated with System Analysts to deliver maintenance enhancements (MTC) for recurring production issues.

- Developed digital document generation services using Spring Boot, Apache POI, and electronic stamp integration as part of the company's document digitization initiative.
- Designed and implemented RESTful APIs to enable reliable communication between enterprise applications and backend services.
- Contributed to the implementation of a microservices architecture to improve application scalability, maintainability, and performance.
- Optimized Oracle database queries to improve application response time and overall system efficiency.
- Developed and maintained SSIS packages to support ETL and enterprise data integration processes.
- Performed troubleshooting, debugging, and production support to ensure the stability and reliability of business-critical financial applications.
- Collaborated with Business Analysts, System Analysts, QA Engineers, and infrastructure teams throughout the software development lifecycle.

EDUCATION

Universitas Dian Nusantara | Bachelor of Informatics Engineering
March 2020 – June 2024 | GPA: 3.77/4.00
